Insect and pest problems continue to persist while consumers, manufacturers and government agencies continue to look for safe but effective solutions. People are well aware of the safety issues and remain concerned, but never the less, the use of man-made, synthetic pesticides increases annually. Many have turned to natural products, but they too can have faults. Poor performance, offensive odors and tastes, formulations containing undesirable materials such as animal wastes, are not uncommon and although natural, high toxicity can still be an issue in many of them.

We at Bio-Plex, understand these concerns because they are the same as ours. Our mission remains clear – to try to address all of your needs – to develop and make available products that would effectively reduce pest damage and annoyances, while being gentle and safe around our families, pets, plants, and the environment.

Closely examine the overall list of ingredients printed to the upper left and on any of our products labels. You won't find any hard to pronounce, unfamiliar chemical names. What you will see are many recognizable, common, safe ingredients. Bio-Plex "Natural Repellent's", provide's a safe and cost effective alternative solution to serious and difficult pest problems!
